

CLEANING GUIDELINES

To properly maintain the clarity and enhance the life of your Eurotech shower enclosure, we require that you follow these simple maintenance and cleaning guidelines:

- Always use mild soap or glass cleaning solution. The following products are approved for use: non-ammonia Sprayway Glass Cleaner and Stainless Steel Cleaner.  products can be found here: www.spraywayretail.com
- Here is a list of some of the cleaning agents and tools that must be avoided: abrasive or soft-abrasive powders and liquids, bleach or bleach based cleaners, steel wool or Teflon pads, razor blades and scrapers
- Regular use of a clean, lint-free microfiber cloth or squeegee is an easy way to remove soap, dirt and other shower residue
- Maintain your shower seals by simply cleaning your seals as you would your shower door hardware - do not use bleach, ammonia, or any strong chemical, which will make the seals brittle and discolored

If you have questions or encounter any issues, please call our office or visit our website. Thank you for your purchase of a Eurotech shower product.
